

*Trivia of the week: Who works with fossils and pressure vessels?*

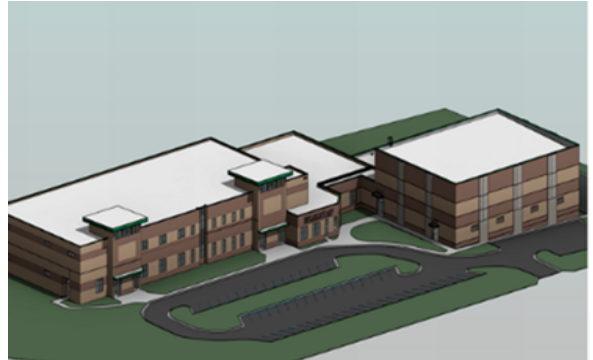

*A. Engineer B. Boiler Maker C. Plumber D. Chimney Maker (See answer on last page)*

## Project: Hank Aaron Academy Additions & Modifications

Week Ending: January 10, 2025

### THIS WEEK:

- Completed cafeteria demo
- GA Power continuing to bore for new transformer
- Started Phase 2 demo parking lot

*Demolition of front entrance parking area*

*Asphalt being hauled off*

*Door frames received*

*Finalizing cafeteria demo, removing plumbing vent pipes and supply lines*

## **NEXT WEEK – January 13th -January 17th**

- Complete installation of transformer by GA Power
- Finalize Phase 2 demolition of parking lot
- Begin construction of the building pad

## **Answer: B- Boiler maker**

### **Explanation**

A boiler maker is the correct answer because they are skilled workers who specialize in the fabrication assembly, and repair of boilers, which are pressure vessels used to generate steam or heat water. Fossils are often found in rocks or sedimentary layers, and boiler makers may encounter fossils while working with the materials used in boilers.

## **SCHEDULED DATE OF SUBSTANTIAL COMPLETION**

- December 1, 2025

## **PREPARED BY:**

Karee Shaw, Carroll Daniel Construction Co.
