

**History of the Week:** Did you know...The tradition of topping out a new building has roots in ancient Scandinavia and Native American practices, where a tree was placed atop buildings to honor tree-dwelling spirits. Norwegian ironworkers brought this custom to the U.S. in 1898, though Native Americans already honored forest spirits by topping structures with evergreens. Topping out marks a significant milestone in construction, usually involving the placement of the final steel beam, with a tree or leafy branch, often adorned ( see pictures below)
